2. The audio signal supply apparatus according to claim 1, wherein an amount of delays indicated by delay control information generated based on the second directivity parameter is 0 or an equal amount.

3. The audio signal supply apparatus, which supplies an audio signal to a loudspeaker array constituted by a plurality of loudspeaker units, characterized by comprising:

branching means for branching an input audio signal into two or more signals;

first processing means for performing a delay process and/or weighting for each of the signals that is obtained by branching one audio signal and is to be supplied to the loudspeaker units in accordance with first provided directivity control information;

second processing means for performing a delay process and/or weighting for each signal that is obtained by branching one audio signal and that is to be supplied to the loudspeaker units in accordance with second directivity control information that is provided;

directivity control means for generating the first directivity control information and the second directivity control information so that a directional characteristic of the loudspeaker array obtained by the first process differs from a directional characteristic of the loudspeaker array
